RULES

1. In ordering goods, give specific description and always order by **Catalogue number** and **number of plate;** do not use the words "Same as last."

2. State distinctly how the goods ordered are to be shipped, whether by freight, express, mail or otherwise. If there is any preference for a certain route, it should be mentioned on the order.

3. Great care is used in filling orders promptly, packing goods properly and obtaining receipts from carriers for delivery in good condition. We cannot, therefore, be responsible for goods damaged or lost in transportation. All possible precautions, however, will be used to prevent injury or delay, and if requested, shipments will be traced.

4. All claims concerning the shipment of goods must be made within three days from their receipt, and should be accompanied by the packing slip, which is forwarded with each shipment.

5. When referring to orders always give the number or date of your order.

6. Do not return material of any kind without first communicating with us and obtaining: 1st, Our approval for returning goods; and 2d, The proper shipping directions.

7. All returned goods must be plainly marked with the **name and address** of the sender, and proper notification of shipment with copy of shipping receipt **must** be sent to us.

8. The prices contained herein supersede all former prices.

9. Orders from persons unknown to us should be accompanied by draft or Chicago references, or if desired to be sent C. O. D., an amount sufficient to cover express or freight charges.

10. Boxing, casks and barrels are charged extra.

11. Prices subject to change without notice.

Respectfully,

R. WILLIAMSON & CO.

Observe the Following Instructions and Avoid Errors

LENGTH AND SPREAD OF FIXTURES

The length of fixtures is from the top to the lowest point, whether it is the key or the bottom knob. The spread of fixtures is from burner to burner.

When sending height of ceilings, measure from the end of gas pipe down to the floor.

EXTRA LENGTHENING

Polished and Lacquered

3/8 inch brass tube, - - -	per foot, 30c. list
5/8 inch brass casing and iron pipe, -	per foot, 35c. list
3/4 inch brass casing and iron pipe, -	per foot, 40c. list

Add 15% for oxidized copper finish.
Add 15 % for oxidized silver finish.

FINISH OF FIXTURES

Fixtures are regularly finished in rich gilt, rich gilt and mat, or polished brass.

Oxidized copper finish, - - - - -	add 10%
Oxidized silver finish, - - - - -	add 20%

Fixtures will be shipped in the finish mentioned under each, unless ordered otherwise.

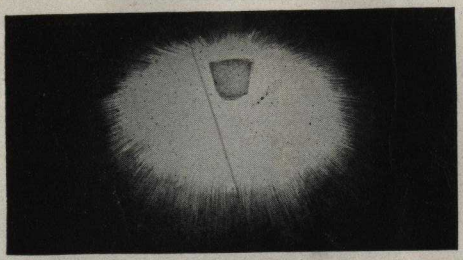
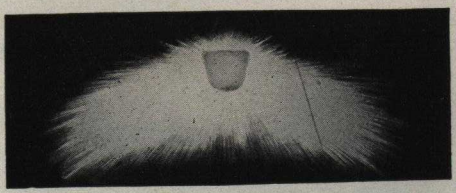
CLASS A Holophanes are recommended for use where the light is directly above the objects requiring the strongest illumination.



CLASS B Holophanes are intended for use in all cases of interior lighting where a strong illumination is required in all directions below the horizontal.



CLASS C Holophanes throw the strongest light in the direction most useful for the illumination of large areas, where the lights are necessarily placed far apart; or where it is desirable that the light itself should attract attention.

WHAT IS HOLOPHANE GLASS?

Explanatory

HOLOPHANE GLASS IS DESIGNED TO ACCOMPLISH A DOUBLE PURPOSE:

FIRST.—A complete diffusion, and consequent softening of the light.

SECOND.—A better distribution of the rays, throwing the strongest light where the greatest illumination is required.

THIRD.—The removal of all glare, streaks and dazzling points, and a light that is both hygienic and agreeable in quality.

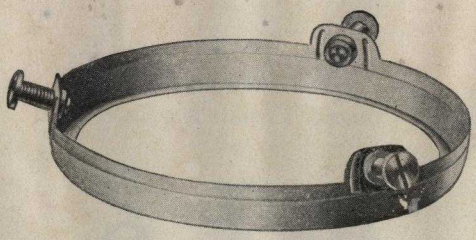
SPECIAL NOTICE

IN REFERENCE

Welsbach Universal Burners

The Universal Welsbach Burner has been improved until it is as near perfection as human ingenuity and experience can make it. The improvement is so radical that to-day we absolutely guarantee it to give satisfaction. Blackening of mantles is prevented by the use of the Improved Center-Hole Regulating Bunsen Tube. Gas regulation is easily and quickly made without disturbing the burner. The use of all styles of mantles is made possible by means of a mantle wire lug, while adjustable fittings permit the use of 4-inch Gas and all sizes of Incandescent Electric Globes, or all other styles of glassware, either globes or shades.



No. W 17

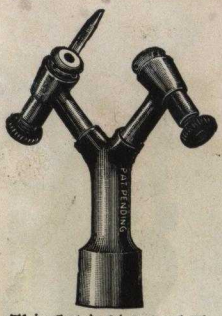
Drake Acetylene Burners



This Cut is ¾ Actual Size

No. 0266

Drake's Adjustable Acetylene Burner, No. 1

One side can be turned off and the other turned down for a hall or night light, or for other purposes where a small light is required temporarily. The little needle valve, at the same time, removes any obstruction from the rear of the gas orifice. Not designed to regulate all sized flames, but is made in ½, ¾ and 1 foot sizes when the needle valve is withdrawn. Can be turned into alignment.

Dozen.....$7.00

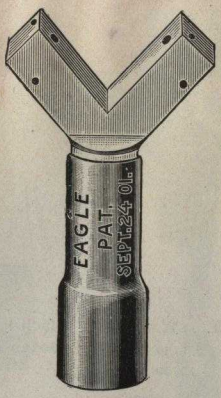
Type "E" Eagle Burner

Non-Carbonizing



No. 0277

⅛, ¼, ½, ¾, 1, 1¼ and 1½ cubic feet

Single Burners	$ 0.50
Dozen	5.00
Gross	50.00

Made of One Solid Piece Lava, Nickel Plated Pillar

The Type "E" **EAGLE** Acetylene Gas Burner, patented September 24, 1901, is the best and most advanced scientific acetylene burner that has ever been placed on the market.

The gas enters the gas-mixing chamber and the pressure under which it flows causes the air to be drawn by suction through the air-holes into the gas-mixing chamber to mingle with the gas.

The air being drawn into the gas-mixing chamber through these air-holes tangently causes the air to circulate in the gas-mixing chamber in a rotative or whirling motion, as a consequence a whirling or rotative motion of the intermingling gas and air is produced so that the gas and air thoroughly combine before delivery at the mouth of the mixing chamber, thus insuring complete combustion.

This explanation may be somewhat technical, but it must be admitted that by getting a thorough mixture of gas and air perfect combustion is obtained, perfect carbonization of the burner is avoided, and a larger volume of light with the same amount of gas is assured.

ACETYLENE GAS TABLE LAMP

No. 0701
Electrolite Lamp

Since the discovery of Acetylene, there has been great activity on the part of inventors to produce a thoroughly practical house lamp. Several lamps have been put on the market, each claiming to be the only perfect lamp.

In our lamp we employ the principal of feeding the carbide into water. The carbide is fed into the water in small quantities, as needed to generate the gas as fast as used. When the light is shut off the feed of carbide is positively checked, and there can be no gas generated until the lamp is again lighted.

The Electrolite generates gas for immediate use only, but is always ready for lighting at once.

The shape and finish of the lamp makes it an ornament for any home. It is simplicity itself in its operation, is easily charged and cleaned. Its internal mechanism is simple and cannot get out of order. It is safe; it cannot explode under any circumstances. It is economical; cheap as gas or kerosene.

Nickle Plated..... each, $15.00

No. 0701½. Hanger for above lamp, so as to suspend it from ceiling, each $5.00

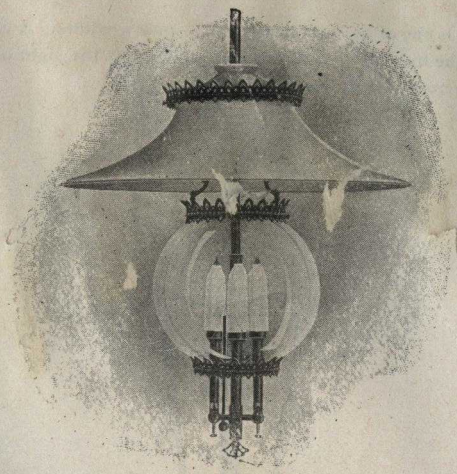
Indoor Lamp

"Four Mantles"



No. 0385

Each.....$13.00

Equipped with—

Our improved Patent Burner with Pilot Jet Lighter.
Detachable, sliding, adjustable globe holder; which suspends globe from top.
Our special long bunsens with needle point adjustment and center supports.
Nickel plated steel gas supply pipe and sleeve protecting same.
Opal lead glass shade, 18 inches in diameter.
Clear lead glass globe, 9 x 9.
All other parts of Lamp are of brass, oxydize finish. Our Lamps are made by skilled mechanics, in our own factory. Packed one Lamp in a box, complete without mantles.

Points of Economy.

Decreased gas consumption, decreased breakage and cost of maintenance, with **increased** candle power.
Pilot Flame is extinguished when mantles are lighted.
To regulate Pilot Flame adjust screw at bottom of Lamp.
All complicated mechanism has been eliminated in the construction of this Lamp.
This Lamp casts no shadows, and can be adjusted when burning.

Window Reflector

This style is one of the best for lighting show windows. It can be hung high toward the front of the window and will reflect the light on the goods and not interfere with the display.

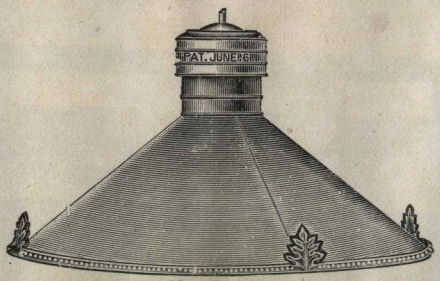
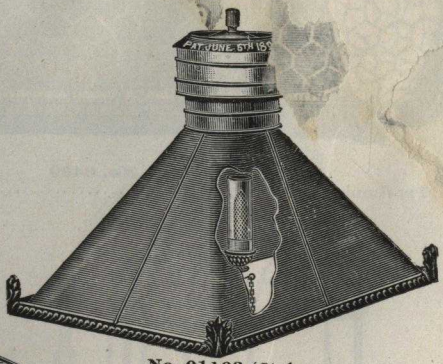
Card and Billiard Table Reflectors



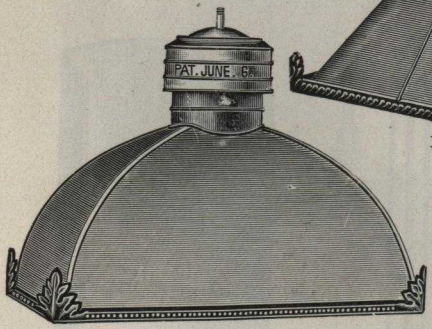
No. 01106

Card Table or Chandelier Reflector will throw a ray of light 30 feet square, as powerful as three ordinary burners.

30 inches in diameter.....each, $15.00



No. 01103 (Style 1)



No. 01104 (Styles 2 and 3)

The Billiard Table Reflectors, when placed 6 feet 1 inch from the floor, will cut the outer edge of a 5x10 table, giving a uniform light that will not shine in the player's eyes nor cast any shadows. If an extra strong light is desired, two Reflectors can be placed over a 5x10 table so that the light will be most intense. Each Reflector is arranged for one Welsbach Burner, which is included.

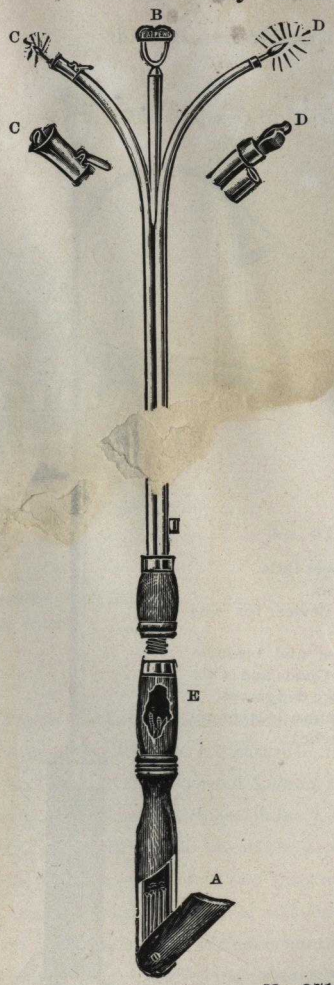
The "Handy" Double Gas Lighter



No. 0718

The "Handy" Double Gas Lighter

Open receptacle (A) at lower end by swinging its door to the right; take a match and ignite it on the rough surface of the fork (B). If you intend lighting a few jets only, insert match in clasp (C) by merely pushing it in. When through, open clasp and let the match fall down the tube. In case you have more jets to light, ignite taper (D) with the burning match, open clasp (C) and let the burning match fall in, (E) box holding used matches; if necessary to empty same, unscrew top, and throw the stumps away. Always ready for use. No burnt matches to soil carpet and floors. They are strongly made of brass (not tin) and will not twist or turn when in use. They are the best made.

The "Handy" Double Gas Lighter ..... dozen, $12.00

"Ever Ready" Electric Gas Lighter

No. 0722

Complete with Battery.....each, $3.00
New Battery..... " .55

Lights about 1500 times before a new Battery is needed.

A Joy in the Kitchen; a Pleasure in the Parlor.

An Electrical instantaneous Lighter for all Gas Ranges, Gas Stoves, Gas Heaters, Gas Burners, in House, in Store, in Factory, in Laundry.

CLEAN.—No Wires. no Chemicals, no Oil, Grease, Smoke or Smell.

NO DANGER.—Prevents those shocking, nerve-racking Explosions due to the Gas being turned on while scratching match after match, or lighting paper. No more burning of fingers poking short matches or paper into range or heater. Children cannot burn themselves; it ignites nothing but the Gas.

STRONG.—Beautifully made; cheaper than matches; lasts for years.

GOOD.—It is a Comfort, a necessity in the Kitchen, especially for Summer Cooking, when Gas is turned on and off so often. It is indispensable for Work Rooms using Soldering Stoves and Gas Heaters; it is Handy everywhere where Gas is used.

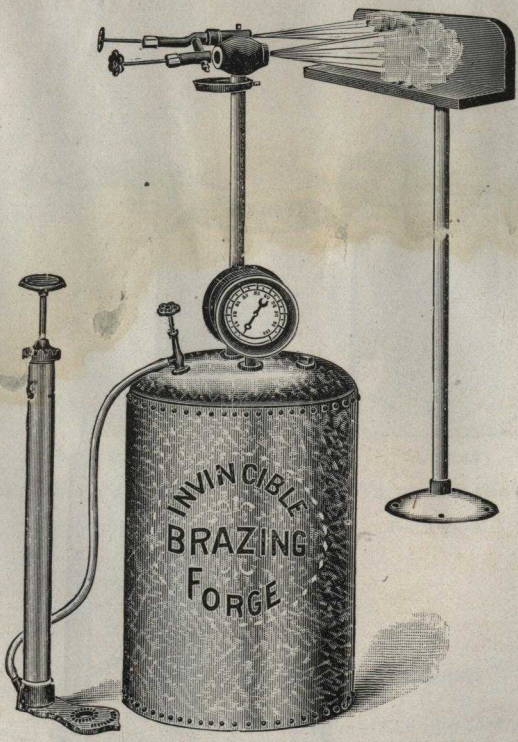
Brazing Forge for Gasoline

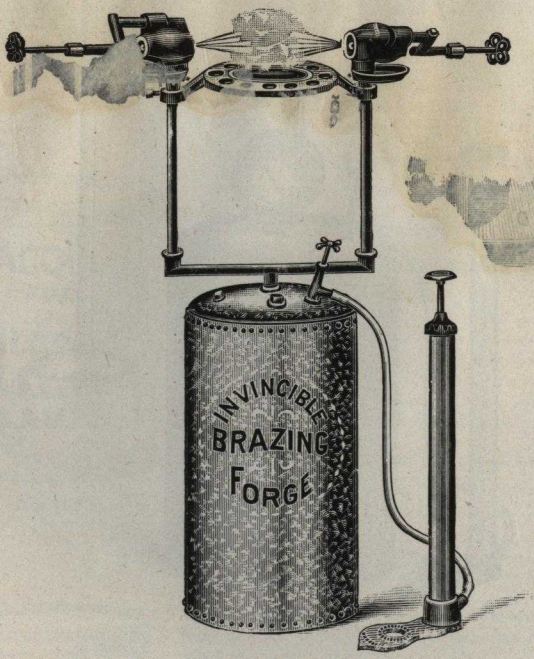


No. 0725

This Brazer is fitted with twin burners, heated by one drip cup, and so arranged that when one is heated the other may be instantly applied if more heat is desired. The burners, jets, valves and connections are of the best and strongest bronze. The needle valves are of our celebrated shouldered pattern, the point keeping the orifice clear while the shut-off strain is borne by the shoulder. The work rest is separate from the brazer, so that the flame can be used at any angle, and the reflector is asbestos filled to retain the largest amount of heat possible. Swing cups for spelter and borax are provided and a small cup in bottom of work rest to catch any drops of spelter.

Each.....$42.00 Without gauge.....$36.00

Order by catalogue numbers



No. 0726

Brazing Forge for Gasoline

This is the smaller size and intended for repair shops and those not having steady use for a Brazer. The tank is of galvanized steel, holds 5 gallons, and is tested to 250 lbs. pressure. The burners and connections will stand any pressure that can be pumped. The pump, though shorter, is of the same quality as those used on our larger brazers.

No. 0742

Torch for Gasoline or Alcohol

Style 12 is a thing of beauty, and will be a joy forever to the user. Burns either gasoline or alcohol. It is made on new principles by which the air blast is passed through a chamber charged with gasoline or alcohol gas, which makes a much stronger fire than can be had in any other way. When blow tube is not used the torch makes a fine candle, which the user will find valuable when working in dark places. A hook is provided so that it may be hung up; is well made, all parts being brass, nickel plated, and finely finished all over. Size being ⅞ inches diameter and 6 inches high, just fits the vest pocket. As this torch does first-class work, using gasoline for fuel, which is much cheaper than alcohol, it will save its cost in a short time in cost of fuel alone. We warrant it to please you.

Each.....$1.50

Order by catalogue numbers

No. 0733

Torch

Style 1 is a favorite with electricians, plumbers, painters and repair men. It is fitted with the latest improved burner and swivel. The tank is made of heavy spun brass, free from seams, and is fitted with our brass air pump.

It will remove more paint and leaves the wood in better condition than any other torch made. You will note that the torch is constructed so that the user holds it in his left hand, leaving the right hand free to use the knife. The flame being at the side of the tank, and free from smoke, the operator is enabled to see the work and follow with the knife, thus doing much quicker and neater work. With other makes the user can not see so well what he is doing, and as he has to move the torch out of the way before he can see the work with the knife, he must necessarily heat the surface hotter, which many times results in scorching the woodwork and leaving the surface rough. In hard or impossible to use an oil finish, the Style 1 all these difficulties are removed.

No. 0733..... $6.00

No. 0734

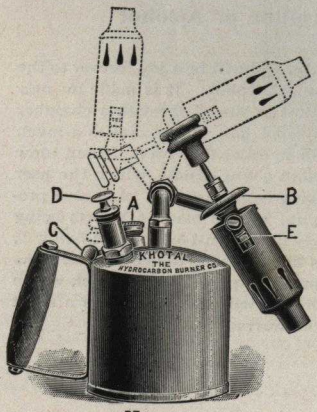
Twin Torch

Style 5. We have added the Style 5 torch to our line to enable us to supply the demand for a torch that was suitable and would do all kinds of work. There are many mechanics who do not have sufficient work in any particular line to keep them busy at that particular work. Many electricians do both inside and outside work, and want a torch that will do both nicely, and save the expense and trouble of having two torches. The same may be said of other trades using torches.

No. 0734..... .....each, $6.00

"Khotal"

Kerosene (Petroleum) Oil-Burning Adjustable Torch



No. 0739

It is adjustable. By means of a swinging joint carefully constructed to avoid the possibility of leakage, the flame may be turned in any direction without moving the tank, making it equally adaptable for low down or upright work.

By means of a needle valve the flame may be governed to any desired size.

It cannot be blown out. The flame is so perfectly protected that it will be maintained in open-air work.

No special needle is required for cleaning the nipple. If any article should lodge in the nipple hole, a turn of the needle valve will clear it.

1 pint size .....each, $7.00

Order by catalogue numbers

Gasolene Torches

No. 0735

Style 19. This torch never fails to please the repair man. The tank is drawn out of heavy brass, free from seams, thoroughly reinforced, and holds one pint. Has improved brass air pump which forms part of the handle. The burner, like all our burners, is a perfect generator, and produces a clear, blue flame, which is easily controlled by the needle point. The burner tube is fitted with hook and rest for holding soldering coppers. Any work any torch will do may be done with this, and in addition soldering coppers may be heated—a point appreciated by repair men. Style 19 is strong and well made, but still is light and can be carried in the repair man's bag. It is always ready for use. We want you to please you

No. 0735.....each, $4.50

No. 0736

Style 16 is one of the most popular quart size torches we make. The tank is drawn in one piece out of heavy brass, and it has brass air pump in handle. The burner is round and has wood handle. This burner has a powerful generator, which produces a strong, clear, blue flame, using very little gasolene. In fact it will soon save the user its cost in the saving of gasolene alone. It is well made and nicely finished. It is light, well balanced, easily handled, and will please the user.

No. 0736.....each, $4.50

No. 0738

Style 18. We are offering you a pint size torch that is up to the minute. The tank is drawn out of heavy brass, free from seams, and all fittings are heavy. Reinforcements are used to make the tank extra strong. A brass air pump of the latest design forms part of the handle.

No. 0737.....each, $4.00

Style 17. We offer you a quart size torch having every improvement that improves. The tank is drawn out of heavy brass, free from seams, and all fittings are heavy. A hook and a support are provided on the burner tube so that soldering coppers may be heated when desired. With it the user can do any work any other torch will do, and in addition can heat soldering irons.

No. 0738.....each, $5.00

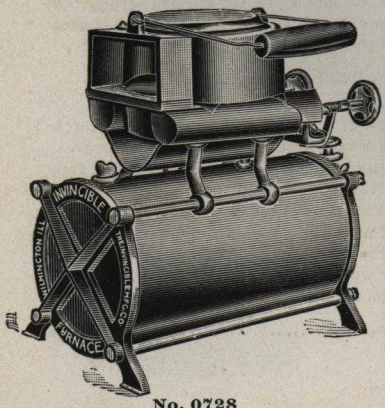
Furnace for Gasoline

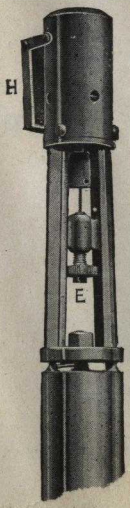


No. 0728

This furnace has a cylindrical brass tank, rigidly held by skeleton face plates and steel rods, so the pressure does not come on the heads or joints; brass pump, solidly connected and capable of putting on any pressure desired; shouldered needles, keeping the jet orifices clean and saving wear; generator, jets and all connections made of our special bronze; pan to catch solder and dirt, and a steel asbestos-lined shield to keep the heat from the tank. It will stand any wind and any pressure, and will quickly heat the heaviest coppers or melt a pot of metal. For many jobs, but one burner need be used, thus saving half of the fuel, and the second burner may be applied instantly if more heat is desired. The burners are simple and powerful, heating the whole length of the copper except the point. The generator has no intricate passages and will never clog. The pump and valves are located at the back, away from any chance of damage. Its many advantages make it worthy of its name. For plumbers, tinners and electricians.

Each $12.00

Order by catalogue numbers



Mitchell Soldering Tool

No. 0744 is the most economical ever produced. It dispenses with the furnace or heater, being self heating; it saves the expense of filing, and tinning is less often needed, for the heating of the copper is from the inside; it wants but a short time to become heated for work, and once ready, remains so as long as required, and yet it can be instantly stopped. In average work it will run five consecutive hours without refilling, and actually costs but about one-fifth of one cent per hour to operate. It will pay for itself in a few days' constant use.

Each.....$12.00

No. 0744

Mitchell Torch

No. 0743. Generates and burns a pure hydrocarbon gas, giving perfect combustion, the most intense flame and the quickest heat ever realized from the amount of gasoline consumed.

Requires only one pumping, pressure automatically maintained.

Safest torch in use. Absolutely no smoke, no soot, no odor.

Costs less to operate than any other torch—about five cents for ten hours.

On account of its size and shape the Mitchell Torch can be used where it would be impossible to use any other.

Altogether the cheapest, safest, handiest torch made.

Gas Fitters' Rules

The following tables show the proportionate size and length of tubing allowed

Office Buildings, Dwelling Houses and Flats

MANUFACTURED GAS FOR LIGHT

Size of Tubing	Greatest Length Allowed	Greatest Number of ⅜-in. Openings Allowed
⅜-inch	20 feet	2 openings
½-inch	30 feet	3 openings
¾-inch	60 feet	10 openings
1-inch	70 feet	15 openings
1¼-inch	100 feet	30 openings
1½-inch	150 feet	60 openings
2-inch	200 feet	100 openings
2½-inch	200 feet	200 openings
3-inch	300 feet	300 openings

Drops in double parlors, large rooms and halls of office buildings must not be less than ½-inch.

Stores, Hospitals, Schools, Factories, Etc.

MANUFACTURED GAS FOR LIGHT

Size of Tubing	Greatest Length Allowed	Greatest Number of ½-in. Openings Allowed
½-inch	20 feet	1 opening
¾-inch	60 feet	8 openings
1-inch	70 feet	12 openings
1¼-inch	100 feet	20 openings
1½-inch	150 feet	35 openings
2-inch	200 feet	50 openings

For stores the running line to be full size to end of last opening. All drops to be ½-inch with set not less than 4 inches. Twenty feet of ⅜ inch pipe allowed only for bracket lights.

BUILDING SERVICES

In running service pipe from front wall to meters the following rules will apply

Size of Opening	Greatest Length Allowed	Greatest Number of ¾-in. Openings Allowed
1-inch	70 feet	1 opening
1¼-inch	100 feet	3 openings
1½-inch	150 feet	5 openings
2-inch	200 feet	8 openings

All openings in service must be equal to the size of riser, which in no case must be less than ¾-inch.

MANUFACTURED GAS FOR FUEL

Size of Tubing.	Greatest Length Allowed.	Greatest Number of ¾-inch Openings Allowed.
¾-inch	50-feet	One ¾-in.. or two ½-in.
1-inch	70-feet	Two, or one ¾-in. and two ½-in.
1¼-inch	100-feet	Four, or two ¾-in. and four ½-in.
1½-inch	150-feet	Seven, or four ¾-in. and six ½-in.
2-inch	200-feet	Fifteen, or eight ¾-in. and fourteen ½-in.

For mantles, grates and small heating appliances, for heating space not to exceed 1728 cubic feet, thirty feet of ½-inch pipe is allowed for one opening only, and two such openings are considered as one ¾-inch opening.

FOR GAS ENGINES

Size of Engine.	Size of Opening.	Greatest Length Allowed.
1 H. P.	1-inch	60 feet
2 H. P.	1¼-inch	70 feet
5 H. P.	1½-inch	100 feet
7 H. P.	1½-inch	100 feet
12 H. P.	2-inch	140 feet

Supply for gas engine must be separate, and an independent service will be required.

NATURAL GAS FOR FUEL

Classification of Appliances.	Size of Openings.	Greatest Length Allowed.
Small portable gas cooking stove	½-inch	20 feet
Small portable gas heating stove	½-inch	20 feet
Kitchen boiler heater when separated from range	½-inch	20 feet
Miscellaneous appliances consuming less than 15 cubic feet per hour each	½-inch	20 feet
Gas cooking ranges	¾-inch	30 feet
Ordinary coal ranges, equipped for the use of gas	¾-inch	30 feet
Large heating stoves	¾-inch	30 feet
Gas logs or other grate fires	¾-inch	30 feet
Miscellaneous appliances consuming 15 to 40 cubic feet of gas per hour each	¾-inch	30 feet
Miscellaneous appliances consuming 40 to 75 cubic feet of gas per hour	1-inch	60 feet
Hot air furnaces for heating 10-room buildings or less	1¼-inch	70 feet
Hot air furnaces for heating 10 to 15-room buildings	1½-inch	100 feet
Low pressure steam or circulating water boiler for heating 10 rooms or less	1½-inch	100 feet
Low pressure steam or circulating water boiler for heating 10 to 15-room house	2-inch	140 feet
Low pressure steam or circulating water boiler for heating 16 to 26-room houses	2½-inch	200 feet
Low pressure steam or circulating warer boiler for heating 27 to 50 rooms	3-inch	300 feet
Low pressure steam or circulating water boiler for heating 50 to 80 rooms	4-inch	400 feet

For special purposes not provided for above, apply to the Gas Company's Inspector for information.

SUMMARY

1 All branches or cross lines of pipe from the main line must have a set not less than four inches dropped square, and must be well secured to joist by gas hooks or straps.

2 All openings must be closed with iron caps, no split pipe or broken fittings repaired with cement or lead will be allowed.

3 All drops on branch lines and openings for side brackets must be square bends; no nipples allowed.

4 The risers in all buildings must be carried up an inside partition out of reach of frost, and must be placed where the meter and stop cock can be readily got at. Vestibules not to be considered as inside partitions.

5 To avoid trapping, gasfitters must grade all pipes to riser or drops.

6 In no case will a meter be set where it is not easily accessible, or where it is exposed to frost and dampness, or liable to injury from any cause.

7 All pipes for fuel must be run independent, and connected to light riser at meter end, with right and left, union, or running thread.

8 Supply for gas engines must be separate, and an independent service will be required.

9 Drops in churches, schools, public halls, stores, double parlors, large rooms, etc., must not be less than ½ inch.

10 No riser in any building must be less than ¾ inch, and in stores must not be under deck of show windows, as meter will not be set there.

11 The riser in any building must not be less than 20 inches from the floor for two to ten openings.

2 feet 6 inches for ten to thirty openings.

4 feet for thirty to sixty openings.

5 feet for sixty to one hundred openings.

6 feet for over one hundred openings.

Where meters are to be set on wall, no riser must be higher than 9 feet from the floor.

12 In all cases where extensions are made, care must be taken to break pipe where the rule for size can be maintained, and in no case shall extensions be made from small pipes.

13 In flat buildings meters should be set in basement or in room provided for meters; otherwise in premises where gas is consumed.

14 All risers and building services must be brought to front of building and within 18 inches of wall or partition, and must not be less than 15 inches apart where risers are grouped.

15 In all cases where building service is used, provide header with an opening for each riser; where risers are in groups, openings must not be less than 15 inches apart.

16 Underground work by gasfitters between main and meter will not be allowed or accepted.

17 To avoid complications, gasfitters should consult Gas Company before locating risers in corner buildings.

18 In flat buildings where appliances are installed for the joint use of tenants, such as laundry stoves, driers, etc., run pipe from each meter to laundry and provide a header with a lock cock for each tenant. Fasten securely to each cock a metal tag with the flat number plainly marked thereon.

19 All work must be proved with mercury guage, not less than a 6-inch column of mercury being allowed.

20 All pipes must be examined by the Inspector of Gas Company before being concealed, and twenty-four hours' notice must be given by gasfitters when any pipe is ready for inspection.

21 If the rules concerning the size of pipes are not clearly understood in each case, or if unusual conditions are met with, which the rules do not cover, communicate with the Gas Company's Inspector.

22 It is the purpose of the Gas Company to strictly enforce the above rules, and no certificate of inspection will be given when they are not complied with.

23 Architects, builders and owners of buildings are requested not to allow a bill for gasfitting unless accompanied by a certificate of inspection.

NATURAL GAS

SPECIFICATIONS

LOW PRESSURE STEAM AND HOT WATER CIRCULATING BOILERS

1 Use two-inch cast-iron burner with flattened mouthpiece. For water-leg boilers use this style with a mouthpiece at an angle of 45 degrees, and set so that the mouth of the burner is about three inches above the grate line, and about three inches from side of fire box, and from 8 to 10 inches center to center. For return tubular boilers use the straight burners with flattened mouthpiece set at right angles to the length of the boiler, and from 9 to 12 inches below the shell. For each of the above styles of burners use mixer, having flaring opening for the air and a wire screen covering for the air and gas openings.

NOTE.—Special combinations of these two styles of burners can be used to advantage for certain types of boilers. We would recommend consultation with the Gas Company's representative in all special cases.

2 The burners and valves should be arranged so that the first valve will control one burner only, the second valve two burners, and remaining valves not over four burners each. On the reaches from the header supplying the burners, use ½-inch globe valve for one burner, ¾-inch for two burners, and 1-inch for all over two burners.

3 Drill mixer-pins for the single and double burner, $\frac{3}{16}$-inch each. Drill mixer-pins for balance of the burners, $\frac{7}{32}$-inch each.

4 Place sheet-iron across the fire box between the mixers and the top of the burners in such a manner as to exclude air from the fire box, except what passes through the mixers. Do not place sheet-iron across opening to ashpit.

5 The header must be the full size of the pipe leading to the boiler, as specified in the rules for piping for natural gas. Do not take the supply pipe for any other appliances off the header supplying the boiler.

6 There must be a globe valve on the main line leading to the header within easy reach, which can be used to entirely shut off the supply of gas from the header. This valve should be left wide open when burners are used, and the gas supply controlled by the small valves in front of the boiler.

7 There must be a union between the first valve on the header and the nearest fitting on the pipe, and a union on each reach between the valve and the burners.

8 Do not put in pilot lights. They are unnecessary unless a regulator is used. If a regulator is used, the pilot lights will be put in by the the Regulator Company at the time the regulator is installed. If a regulator is ordered, specify that there must be a mixer on each pilot light.

HOT WATER HEATERS

For water heaters with circular fire pots, such as the Wilks, Tabasco, etc., or for small hot water circulating boilers, use the same equipment as for ordinary hot air furnaces, except that if Vulcan burner is used it should be covered with about 6 inches of broken firebrick.

HOT AIR FURNACES WITH CIRCULAR FIRE POTS

Use the Claybourne Improved Cross Burner, with auxiliary, or the Vulcan Round Sectional Burner, with mixers which have flaring opening for air and wire screen covering both air and gas openings.

DIRECTIONS FOR INSTALLING CROSS BURNERS.

1 Set the burner with bottom of burner on grate line. Put mixer for the main burner on horizontal pipe, using a 10-inch nipple between the mixer and the ell turning up toward the burner. Drill opening in mixer-pin ¼-inch. Place the mixer for the auxiliary burner on the vertical pipe and drill the mixer-pin No. 19 Morse drill. Place the iron deflector, furnished with burner, on top of auxiliary burner, leaving not less than 2-inch space all around between deflector and firepot. If space is greater than 5 inches, extend deflector with firebrick.

2 Sheet-iron must be placed between the mixers and the burners in such a way as to entirely exclude air from the fire pot except what passes through the mixers.

3 Make header for furnace same size as run to the furnace, with 1-inch opening for main burner, and ½-inch opening for auxiliary burner.

4 Use 1-inch globe valve for main burner and ½-inch globe valve for auxiliary burner.

5 There must be a globe valve on the main line leading to the header within easy reach, which can be used to entirely shut off the supply of gas from the header.

6 There must be a union between the first valve on the header and the nearest fitting on the pipe.

7 Do not use pilot lights. They are unnecessary unless a regulator is used. If a regulator is used, the pilot lights will be put in by the Regulator Company at the time the regulator is installed. If a regulator is ordered, specify that there must be a mixer on each pilot light.

DIRECTIONS FOR INSTALLING THE VULCAN ROUND SECTIONAL BURNER

1 Burners from 14 to 18 inches in diameter must be of at least three sections, with a separate ½-inch globe valve controlling the supply of gas to each section.

2 Burners 20 inches in diameter or more must be of at least four sections, with a separate ½-inch globe valve controlling the supply of gas to each section.

3 Burners should be placed so that the outside rim of the burner will be not less than 1 inch, or more than 2 inches from the sides of the fire pot.

4 Burners should be placed from 2 to 6 inches above bottom line of fire pot.

5 There must be a globe valve on the main line leading to the header within easy reach, which can be used to entirely shut off the supply of gas from the header.

6 There must be a union between the first valve on the header and the nearest fitting on the pipe.

7 Sheet-iron must be placed between the mixers and the burners in such a way as to entirely exclude air from the fire pot, except what passes through the mixers, and should not be less than 2 inches below the burner.

8 Make openings in the mixer-pins for each section of the burner the size of No. 19 Morse drill.

9 Mixers must be put on the vertical pipes under the burner, and not on the horizontal pipes from header to ashpit.

10 Do not use pilot lights. They are unnecessary unless a regulator is used. If a regulator is used, the pilot lights will be put in by the Regulator Company at the time the regulator is installed. If a regulator is ordered, specify that there must be a mixer on each pilot light.

HOT AIR FURNACES WITH SQUARE FIRE BOXES

For furnaces having a square fire box use the Claybourne box burners, or the Holland box burner. Cover with 4 to 6 inches of broken firebrick. Pieces of firebrick should be about the size of fist. These burners should be set about 6 inches from center to center, with a separate valve controlling the supply to each burner. Drill the mixer-pins for either of these styles of burners, No. 19 Morse drill.

NOTES

1 The above specifications are the result of careful experiments made by us with a view to determining the kind of burners and arrangement which give satisfactory and economical results.

2 It is of the utmost importance in all cases that there should be dampers which will effectually control the draft and remain set in any position desired. The pipe leading to the chimney and the chimney flue should be examined and cleaned. Too much draft is expensive, because of the waste of heat up the chimney, Too little draft causes imperfect combustion and a bad odor from the products of combustion in the basement and throughout the house. Good dampers and proper adjustment of them are as important as good burners.

3 As Natural Gas is becoming more and more generally used in all kinds of appliances, it frequently happens that special forms or arrangements of burners are necessary.
